

GEOCENT

The Agile Business Analyst

Course Description

The **Agile Business Analyst** course explores how the skills, tools and traditional responsibilities of a Business Analyst translate when the BA is assigned to a Scrum Team. Through lecture and workshop format, participants will gain answers to questions such as “What is the Business Analyst’s role on an agile project?” and “How does the Business Analyst work with the Scrum team?” Topics include: Scrum team roles and responsibilities; Agile Requirements; User Stories and Use Case development; Acceptance Test-Driven Development

Intended Audience

Business Analysts and project team members who will be working as part of a Scrum team.

PREREQUISITE: this course assumes that participants have a fundamental understanding of agile core principles and Scrum framework; strongly recommended that participants have attended the 1-day “Introduction to Agile and Scrum” course prior to taking the Agile BA course.

Duration

1 day (8 hours)

What You Get

- Practical instruction in where/how to apply business analysis skills in an agile delivery environment
- Student Workbook and reference materials
- 8 hrs Professional Development Units (PDUs)
